8 Interview with George Fields, Japanese consumer marketing guru

George Fields talks about how computers and the information society are changing the way business is done in Japan, and how some U.S. companies are taking advantage of the situation.

MANGAJIN is a made-up word combining *manga* ("comics/cartoons") and *jin* ("person/people"). It sounds almost like the English word "magazine" as rendered in Japanese—*magajin*. All of the Japanese manga in MANGAJIN were created in Japan, by Japanese cartoonists, for Japanese readers.

Editor's Note

It is only fitting that we include some survey results in this issue, since it spotlights the great researcher, George Fields. Fortunately, we have some results from our subscriber survey sent out with the last issue. The responses are still coming in, but we have tabulated a couple of hundred. We asked about the content of MANGAJIN and some recent changes we have made.

Here's what the readers said about *Calvin & Hobbes*, and U.S. comics with Japanese translations.

Like it, want more	14%
OK, but 2-3 pages enough	59%
OK, but change format	10%
Drop it	18%

We've added readings for all the kanji in the notes of *Calvin & Hobbes*, and it looks like we'll continue running this one for awhile.

Over 90% of the readers were in favor of giving Japanese vocabulary at the bottom of the feature story pages, so that's an easy decision. The next one is a tough call. We asked about the "translation only" format (used in this issue for *Toki no Mukōgawa*, p. 48). The readers said:

Like it, want more	22%
OK, but 7-8 pages enough	35%
OK, but fewer pages	12%
Drop it	31%

Thinking that adding pages might be the only way to please everybody, we then asked "If we add pages, what should they be?" The responses:

Add only manga	18%
Add mix of manga & feature	59%
Add feature only	22%

The types of feature material readers wanted to see were:

Outstanding ads/commercials	63%
Intermediate Japanese column	61%
"Outrageous" Japanese column	58%
Food, cooking & culture	58%
Column on TV/movies	54%
Information on new products	50%

That should give you a pretty good idea of what will be coming up in future issues.

How to use MANGAJIN

In MANGAJIN No. 20 you asked about methods of reading MANGAJIN which prompted me to reflect on this.

When I receive my copy, I first flip through and then read the letters and classifieds. After that I generally read sequentially starting with the language lessons.

As I am studying the Japanese language, I attempt to read the Japanese in the comics first, then read your rōmaji for words I don't know and look at line 3 for the literal transliteration

and finally the English colloquial equivalent. As you can see, the four line style suits me fine—please continue this.

MANGAJIN is the only magazine I can honestly say I read almost all of.

A Kanji Question

I have a question about two kanji that were used in the *Basic Japanese* lesson in MANGAJIN No. 19. On page 24, under "Greetings – Hajimemashite," you have 初めまして as the kanji/hiragana combination. On page 27, where the lady is introducing Sannomiya to her mother-in-law, the kanji/hiragana combination that is used is 始めまして. What is the purpose of using two

different kanji characters—is it a matter of Politeness Level?

JOHN T. KALENDA
Simi Valley, CA

To put it in the simplest terms, we made a mistake in transcription. If you look at p. 27 again, you will see that the manga artist used 初めまして, which is the correct kanji in this case. Your question about why the different kanji is a good one, though, for the two kanji do indeed have different meanings. In general, the noun 始め hajime is used for the beginning/outset of an action, while 初め hajime is used for the start/beginning of a time frame (a year, a month, etc.) and for the meaning "the first (time)." So 初めて hajimete (from which the greeting 初めまして comes) means "for the first time," while 始めて hajimete is just a continuing form of the verb, meaning "[I] began/will begin [something] and..." —Ed.

Shitagi-shiitake

Despite having lived in Japan for two years, I have never acquired a taste for that ubiquitous drink known as *ocha*, though I do like certain other forms of tea that are available in Japan.

The other day I was explaining this to a Japanese friend and told her that I liked *oolong-cha*, *mugi-cha*, and *shitagi-cha*. At this she raised a quizzical eyebrow and asked what *shitagi-cha* was. I explained that it was a tea made from mushrooms, which I had enjoyed once in Nagano Prefecture.

My friend let out a great howl of laughter and informed me that the word was *shiitake* (椎茸). *Shitagi* (下着) is "underwear."

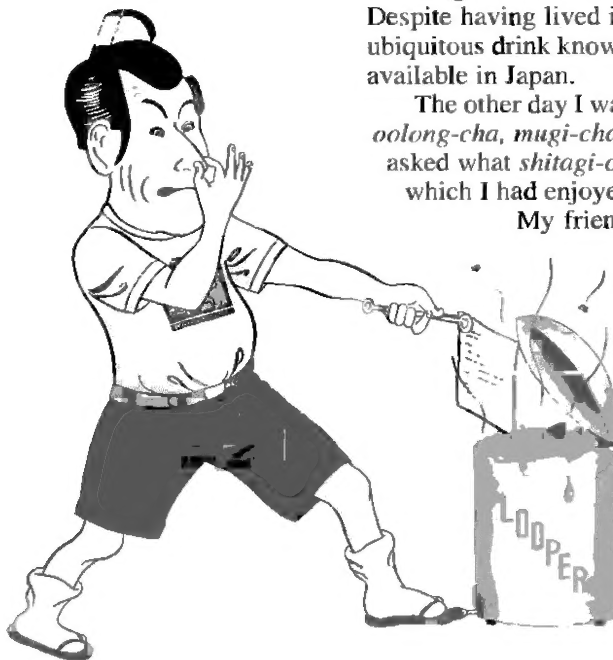

This friend, who is a Japanese teacher of English, had a good laugh, but now I'm now biding my time until she makes her next English blooper.

Innovative uses of the Japanese language in naming products and services

ゆとりっふ Yutorippu

Yutorippu is a combination of the Japanese word *yutori* ("leeway/latitude/the comfort of having more than is absolutely necessary") and the English word "trip," which comes out as *torippu* in Japanese. It's the name given to a series of travel packages offered by *Kinki Nihon Tourist* (*Kinki* refers to a geographical area centering on Kyoto in Western Japan). The idea is that couples over 40, whose children have left home, now have some *yutori* in their lives and can enjoy a *torippu* together.

40代からの	夫婦旅行	ゆとりっふ
Yonjū-dai kara no	Fūfu ryokō	Yutorippu
From your 40's,	Travel for couples,	Yutorippu

Yutorippu, travel for couples from their 40's on.

Yutori is generally written in hiragana, but *torippu*, being an "imported word," would normally be written in katakana. Writing the entire word in hiragana seems to give a more dignified image; or, you could say that katakana might seem too youngish/modern.

The **Keshi Mouse** from Union Chemical.

消しマウス Keshi Mouse

Ordinary rubber erasers are called *keshi-gomu* in Japanese — *keshi* from the verb *kesu* ("erase/delete/rubout"), and *gomu*, meaning "rubber." Thanks in part to Mickey, the word "mouse" (*mausu*) is readily understood in Japanese, and the mouse-like shape of this correction tape dispenser suggested that *mausu* be substituted for *gomu*, creating a name that sounds like "Eraser Mouse." The similarity of *mausu* to the verb ending *-masu* makes this name even more memorable since it sounds like it's saying *keshimasu*, "(I) erase."

The *Keshi-mausu* has a 2-way action — you can correct a single letter or an entire line, and the shape makes it easy to see what you are correcting.

An Interview with George Fields

Japan's consumer marketing guru

George Fields is a leading, some would say legendary, authority on Japanese consumer behavior. He is chairman of ASI Survey Research Group Japan, a company he helped establish in 1965. An Australian, Mr. Fields was born and educated in Japan through senior high school. Before bringing ASI to Japan, he was a senior manager in one of the largest research companies in Australia.

*His books, **From Bonsai to Levis and Gucci on the Ginza** are considered "must" reading for anyone interested in Japanese consumer culture. He has also written seven books in Japanese.*

MANGAJIN Editor and Publisher Vaughan Simmons had the good fortune to work for George Fields at ASI Market Research (as it was then called) back in the mid-1970s. In this article, Simmons finally gets to interview the man responsible for so many Japanese consumer interviews.

You said that when you first brought ASI to Japan, Japanese companies didn't think they needed market research. They had the attitude, "We're Japanese ourselves, so we know what the consumers are thinking." Has that changed?

There's been a dramatic change because starting around 1985, Itō-Yōkadō

started using a kind of computerized inventory control in the 7-11 chain. All of a sudden Itō-Yōkadō shot up to number one in profits, way ahead of Daiei which had many, many more stores, in fact supermarkets. They did it because of their superior inventory control, and the result has been that the personal type of shopkeeping is disappearing.

The computer has norms, and if the product doesn't move according to norms, it's taken off the shelf—it doesn't matter how long you've known the supplier. There was suddenly a realization that unless you understood consumer needs, you were not going to get a second chance.

As a result, Ajinomoto, for example, which had about 3,000 products, has reduced that number to around 800 I think, and they're now making money.

There is no more guesswork involved, and there's been a tremendous shift, particularly amongst the managers and the *kachōs* who are on the firing line—who have to produce results. They suddenly realize that the only way they can produce results is having the right information.

I guess that's stiffening the competition for foreign companies.

Well, the foreign companies are in many cases a step ahead of the Japanese in what I call "consumer pull technology." In the United States there's been a much greater need to use advertising and promotions to pull the consumer into the

store and toward your brand. In Japan all you had to do was secure shelf space. Getting that shelf space has been difficult for foreign companies because the Japanese distribution system had favored the locals, who have their long-standing personal contacts. Now, the convenience stores couldn't care less about personal contacts. They want products that move off the shelf, and foreign companies know how to pull the consumer in. I can't say the foreign companies have an advantage, but it's certainly much more of a level playing field than it used to be.

What are some of the foreign consumer brands that are successful now in Japan?

You hear a lot about the Schicks and the Coca-Colas and so on, but there are other brands that are doing well in Japan in niche markets, like Coach Leatherwear, for example. For the exporter, one percent of the Japanese market can give you a very nice profit. The idea that you've got to have a ten percent market share is ludicrous.

There's an interesting battle going on right now in the computer market. Many people have been writing about America's computer industry and how the Japanese are going to catch up and overtake; well, that hasn't happened, it's been the other way around. Compaq and Apple are doing very well here. Compaq has just launched its new line of products. They have substantial distribution

problems, but they have created quite a stir because they are able to offer machines at half the price of NEC. They may even be able to develop the home PC market which is way behind the United States in per capita ownership.

Mass brands are still more difficult in any country. The Japanese have not been very successful in cosmetics or other consumer items in the United States, and so why should it be the other way around? But in fact, if you look at the Western brands in Japan, some are far more successful in the consumer area than the Japanese brands.

So there's hope for the foreign marketer in Japan.

There's more than hope. I think opportunity is being lost because, as I mentioned, since 1985 there's been a shift in the social structure from a very feudalistic, if you like, industrial soci-

ety—the *keiretsu* and all that—to an information society. The shift is really quite dramatic and it's shaking things up. The consumer is becoming much more knowledgeable, and price is now becoming a factor, which it wasn't just a few years ago.

Do you see any new trends in Japanese advertising, like comparative advertising, or Brand X type ads?

The current Compaq launch prompted NEC to come out with some very, very American-style comparative advertising saying, "Yes, it's cheaper, but you get what you pay for. We have all kinds of software and you'll lose out on all that if you buy a cheap Compaq."

General Motors did some ads comparing their cars to Nissan. Nissan of course, took the high stance because they're not threatened: "We are very honored to be chosen as a comparison,

etc." But it's a very different story with Compaq and NEC because the personal computer market is so different—the price difference is so substantial whereas foreign cars don't have that price advantage.

In *Bonsai to Levis* you mention psycholinguist George Lambert's test involving the interpretation of made-up kanji characters—like a Rorschach test. You said that the Japanese respondents were invariably surprised to know that other Japanese interpret the characters differently from themselves. How pervasive do you think that attitude is among Japanese people—that one is representative of the entire race?

That's the "Ware Ware Nihonjin" Syndrome. Instead of saying "I think this" in a focus group discussion, they would say *ware ware Nihonjin wa* ("We

Japanese...”), as if they represented the whole Japanese race. That exists in people over age 50 I suppose, and even in the younger generation it’s still there, to a large extent because of the uniformity of the educational system. There are some indications that education, tertiary education anyway, is beginning to change. Some universities, actually the weaker universities, are trying to develop a special character in their curriculum, like the United States. If you don’t like math and you just like to write, then they would let you come to the university to learn writing. That has received a lot of publicity anyway.

Education is responsive to market needs, and let’s face it, the market is the corporations. Because of the information society, the corporations’ needs are changing rapidly, so the educational system will have to adapt. Of course it’s going to be very slow.

So the answer to your question is, yes the Japanese still tend to think that they are homogenous, that they think alike and so on. That homogeneity hangup probably is the Achilles’ heel, if you like, of Japan as it moves into the next century, because they’ve got to be able to cope with diversity now.

So it can be tricky for a foreign manager in Japan. His Japanese staff might have that attitude [that they represent the entire race]. What advice would you give to Western business people in that respect?

Well you listen to the consumer, of course, you don’t listen to your staff. The Japanese, particularly the middle-aged staff, are the world’s worst in advising their managers. They say, “Look, I’m Japanese, you’re foreign, so I know the Japanese. How come you think you know better than I do?” It’s an argu-

ment-stopper, but that’s like an American saying, “I’m American so I know the American consumer.” That’s ludicrous, right? Time and time again, that sort of advice has been wrong.

We did a piece of research on Kentucky Fried Chicken, and everybody said “We have *kara-age* in Japan, so who needs Kentucky Fried Chicken?” It’s one of the most successful franchises in Japan.

Your last two Japanese books dealt with the dangers of stereotypes and cultural myths, didn’t they?

My previous book *Tono to Jūyaku* basically said that Japanese corporations must forsake the homogeneity hangup in order to survive; that in fact this is a myth that has really developed more in post-war Japan.

In the current one, *Nihon Kigyō no Kanchigai*, “Misapprehensions of Japa-

nese Corporations," I've turned it around, and I'm really saying that stereotypes about American business are very dangerous for the Japanese as they go global. Their stereotypes of American business are based on General Motors and IBM in the 1970s. Now we're talking about Compaq and Apple—these are the growth companies even within the computer area.

I point out that the perceptions and concepts that drive Americans, and as a result American corporations, are changing. To see America as a stereotype as the Japanese do, will present serious problems if Japan wants to continue its growth, which of course at the moment has come to a grinding stop.

The book is about how to deal with Americans and Europeans now, without perceiving them in terms of stereotypes. Don't expect them to become Japanese when they work for a Japanese company because it ain't gonna happen.

We hear a lot in the mass media about the *shinjinrui* ("new species of man") and changing attitudes. Are things really changing?

I would say the most important change in Japan is not the *shinjinrui* but the women—there's a universality in that. The rapidly aging population is drawing women into the workforce. They only have an average of 1.53 kids—a very small number. Why do you think Nintendo has made more money than Matsushita this year? Because when you only have one or two kids, you spend more money on them. People spend ¥30,000 on a video game machine to please their kids. If you had five kids you wouldn't do that.

Women marry at age 26 on the average. That's very late—another reason for the low birthrate. It's not so much that they don't want to get married, it's the poor housing situation, and they also lose freedom—in the old system, anyway. So they stay in the market until 26 and then they have children, and now increasingly when the child starts going to kindergarten or primary school, they go back into the workforce again. That's very clearly evident in statistics.

Once they start going out to work, they are no longer the *kanai* or the *okusen* [traditional Japanese wife]. They are socially active, and they're the ones that in fact have sparked a lot of the travel boom and leisure boom. The basic change in attitude is coming from the female segment of the population.

In our next issue we have a short article about Japanese attitudes toward information and so I wanted to ask you about that. Of course we're generalizing, but how would you characterize Japanese business people's attitude toward information?

Well, again you have to draw a line around about age

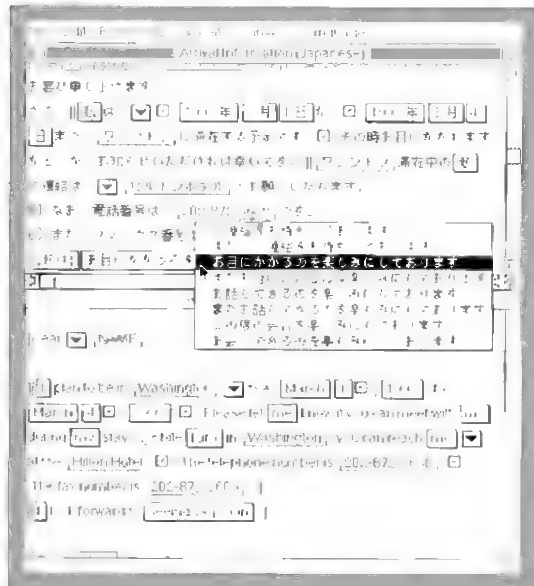

• go global = 全世界的に活動していく *zensekai-teki ni katsudō shite iku* • perceptions = 認識 *ninshiki* • a grinding stop = 不本意な停止 *fuhon'i-na teishi* • deal with = 対応する *taidō suru* • ain't gonna happen = is not going to happen 絶対に起こらない *zettai ni okoranai* • universality = 普遍性 *fuhen-sei* • aging population = 高齢化社会 *kōrei-ka shakai* • draw into = 引き込む *hikikomu* • clearly evident in statistics = 統計にはっきり現われている *tōkei ni hakkiri arawarete-iru* • spark = 点火する *tenka suru* • female segment of the population = 人口の女性層 *jinkō no jōsei-sō* • generalize = 一般論を述べる *ippan-ron o noberu* • characterize = ~の特徴を述べる ... *no tokuchō o noberu*

fifty—basically the pre-computer and post-computer generations. Unfortunately a lot of the senior managers are still in the pre-computer mentality. I'm not talking about people in the high-tech area, of course.

As you know the word *jōhō* 情報 [generally translated as "information"] is written with kanji that mean *nasake ni mukuiru* 情けに報いる, "paying back an obligation or kindness." That ties in with the *senpai-kōhai* thing, *keiretsu*, and the personal relationships that are developed throughout your career. That's what Japan's business is all about. You ring up these guys and you get the information. So you don't pay for information; information is something that you, a senior manager, you should be able to get, because you have a network.

So it's much more personal.

Yes. It's a closed market and was

very organized and controlled till fairly recently. Let's take the extreme case, and this is extreme, of the 20 or so insurance companies whose market share hasn't changed in 20 years. In the United States there are thousands of insurance companies and the market shares are unstable. Obviously there's a controlled market in Japan, and it's controlled by the Finance Ministry, basically.

So under those circumstances, consumer information has very little value. Who you know and how you manipulate is more important than information on the consumer. But as I say, it's breaking down because of internationalization and the computer—the computer means democratization. An ordinary young employee who is computer literate might know more about the performance of the company than the president.

There are barriers to doing business, invisible barriers, if you like, which are

not deliberately constructed, but result more from customs and circles that one cannot penetrate. But with the information society those barriers are less important. Direct marketers, for example, are doing very well, because they have direct access to the consumer. In this current period direct mail marketers have increased their business while everyone else is down. That's a classical example of a shift in power structure where marketers who know how to reach the consumer directly are beginning to clobber those guys who were succeeding before by manipulating the market. There's been a tremendous power shift.

If you would like to see George Fields in action, he is currently the host of "Power Talk," a business talk show on TBS, (Tokyo) channel 6, Sunday mornings.

• that's what ... is all about = *それが...の本質だ sore ga... no honshitsu da* • ring up = 電話する *denwa suru* • is organized = 組織立っている *soshikidatte-iru* • extreme case = 極端な例 *kyokutan-na rei* • unstable = 不安定 *fuantei* • manipulate = あやつる *ayatsuru* • democratization = 民主化 *minshu-ka* • computer literate = コンピューターのことが分かる *konpyūta no koto ga wakaru* • deliberately = 故意に *koi ni* • a classical example = 規範的な例 *kihanteki-na rei* • clobber = 打ちのめす *uchinomesu*

CLINTON AND JAPAN

What a Clinton Presidency Means for U.S.-Japan Relations

People on both sides of the Pacific are busy speculating about how Bill Clinton's victory will affect world affairs. How will Clinton handle U.S. relations with its "most important ally?" What is the Clinton vision of "the new world order" vis-a-vis Japan? And how will Clinton's appointments affect U.S.-Japan relations? The tenor of the Clinton-Gore campaign and current state of the bilateral relationship offer some hints about what is to come.

• **Trade Will Be A "Front Burner" Issue.** The question is not if but how Clinton will try to manage U.S. trade practices in order to help the U.S. regain its competitiveness. Clinton's position on trade will likely be somewhere between Ross Perot (close government management of trade) and George Bush (classical Adam Smith "free hand of the marketplace" economic ideology).

Bill Clinton's policies as Governor of Arkansas and the tone of his campaign suggest that he is guided more by economic pragmatism than theory. He is likely to move toward the Japanese economic model in which interventionist government actively encourages and supports international trade.

Although the U.S. government approach to trade in the past has been characterized by a laissez-faire attitude, there are some notable exceptions. In 1986 the Reagan administration pushed Japan to sign a bilateral agreement that opened Japan to foreign—essentially American—chipmakers. The U.S. government has also changed its thinking on some aspects of antitrust legislation, allowing American companies to form partnerships for research. Government split the cost with industry for "Sematech"—the consortium set up in 1987 to improve manufacturing technology. U.S. and Japanese analysts agree that this kind of de-facto "industrial policy" has provided a big boost to U.S. competitiveness.

Although both Republican presidents said they opposed government trade and investment policies aimed at nurturing specific industries, officials in the computer chip business agree that such policies have turned the industry around. American semiconductor makers facing disaster at the hands of Japanese competition six years ago are expected to pass or at least tie the Japanese in global market share for 1992. Overall, though, there still seems to be a lack of any coherent national economic strategy.

Clinton's proposed Economic Security Council, would coordinate national and international economic policy. The Clinton White House breaks new ground here by re-defining "national security" to include competitiveness and the economic well-being of the country. The plan includes identifying strategic industries, protection of property rights, particularly in areas related to national defense (i.e., high speed computer chips; aerospace) and creation of high value-added jobs.

To coordinate this council, Clinton is also likely to appoint a cabinet-level policy czar to coordinate trade and competitiveness issues for the U.S. Under the current system more than a dozen executive branch agencies and Senate and House committees and the sub-committees seem to have resulted in "too many cooks spoiling the broth."

It is certain that Clinton's trade czar will have much easier access to the new President. Despite Bush's comments in the third Presidential debate, it is questionable that Ambassador Carla Hills was ever part of the Bush inner circle.

For Ambassador to Japan, veteran trade negotiator Glen Fukushima seems to be at the top of the list. This would give the U.S. an ambassador who speaks the language and truly understands the Japanese—and someone who could be counted upon to aggressively represent U.S. trade interests. Mr. Fukushima would also bring to the post genuine insights into the inner workings of Japan's political machinery. The U.S. could have a mid-field seat from which to formulate its Japan options ahead of time, instead of reacting from an end zone view.

Clinton has said that "good foreign policy is good domestic policy," indicating that trade strategy will be directly linked to domestic needs. If Clinton successfully initiates domestic policies to increase the U.S. savings rate and to address the budget deficit, he will have much more credibility with Japan.

• NAFTA Will Grow In Importance

Understandably, the tone of campaign rhetoric about the North American Free Trade Agreement (NAFTA) was focused on jobs and the domestic economy. From the U.S. perspective, NAFTA is an almost involuntary

response to the dynamism of Japan's economy as well as to the integration of the European Community.

Many leading Japanese view NAFTA as somewhat akin to the ploy of "pulling the wagons in a circle" from the old westerns they still watch. For example, in late October 1992, although Prime Minister Miyazawa Kiichi said he didn't expect NAFTA to be "inward-looking," he did voice his fears about not creating a protectionist "fortress" against free trade.

It seems likely that Clinton will use NAFTA in bargaining with the Japanese. For the Japanese, it will be difficult to speak with much credibility about open markets when Japan's trade surplus is predicted to soar to \$120 billion for 1992.

Now that the election is over, the tensions over trade will likely increase. At a minimum, a Clinton administration is much more likely to press for reciprocity in trade, elimination of anti-competitive practices by the Japanese, and achievement of specific trade balance objectives. If Clinton's trade team has clearly defined trade objectives, NAFTA may provide both carrot and stick. The carrot would be more access to the entire North American market, including continuing accessibility to low wage rate *maquiladora* plants. The stick would be the threat of withdrawal of trade advantages, or the possibility of sanctions based on the lack of reciprocity. Complicating the issue further will be the fact that when NAFTA is enacted, the U.S. and Japan will not be able to bargain bilaterally as they have in the past.

• U.S.-Japan Cooperation on China Will Increase. In terms of strategic significance, few issues loom more important than what is euphemistically referred to as "the China problem." Even as much of the world has tilted toward democratic institutions, China's resistance to reform creates uncertainty and instability for both the U.S. and all of Asia, including Japan.

Clinton's lack of China expertise will be a disadvantage. As Ross Perot liked to (continued on page 20)

Sarari-kun

サライ君

西村 宗
by Nishimura Sō

1

Sarari-kun

& Wife: クリントン オメデトーン!

Kurinton omedetō!
Clinton congratulations

"Congratulations, Clinton!" (PL2)

- *omedetō* is a congratulatory greeting used for a wide variety of joyful/auspicious occasions, including birthdays, New Year's, times of significant personal achievements, and political campaign victories. The greeting is derived from the adjective *medetai*, "joyous/auspicious/happy (event)." The complete, more formal expression is *Omedetō gozaimasu*.

2

Sarari-kun

& Wife: 団塊の世代 バンザイ!

Dankai no sedai banza-i!
baby boom generation hurray

"Hurrray for the baby boom generation!" (PL2)

- *dankai* basically means "lump/mass" and *sedai* means "generation," so *dankai no sedai* is literally something like "the lump generation" — presumably referring to the "lump" that appeared on population charts as a result of the baby boom. The words ベビーブーム *bebii būmu* (from English "baby boom") and ベビーブーマー *bebii būmā* ("baby boomer") are also commonly used in Japanese.

3

Grandma:

わたしにも一言
Watashi ni mo hitokoto

I/me to also one word

"Permit me to say a word, too." (PL2)

- in this usage *ni* implies a verb at the end of the sentence like *iwasete*, the *-te* form of *iwaseru* ("cause/allow [me] to say") from *iu* ("say"). The particle *ni* indicates that the action is done to/toward/for the speaker, and *mo* means "too/also."
- *hito-* is a prefix meaning "one/a single," as in the generic counter series *hitotsu* ("one [item]"), *futatsu* ("two [items]"), *mitsu* ("three [items]"), *yotsu* ("four [items]"), *itsutsu* ("five [items]"), etc. Written with the kanji 言, *koto* means "word/thing to say."

4

Grandma:

サンキュー ブッシュ!

Sankyū Bushu

thank you Bush

"Thank you, Bush." (PL2)

- in this case Grandma uses the katakana rendering of English "thank you" simply because she imagines herself to be speaking to an American, but *sankyū* is also widely used among Japanese as an informal expression of gratitude, especially by young people. Non-native speakers should generally restrict their use of *sankyū* (pronounced Japanese style) to situations where they know they can use PL2 expressions, such as among friends/close acquaintances.

point out, running the corner grocery store is inadequate preparation for running Wal-Mart, and running Arkansas hardly prepares Clinton to deal with the complexity of the China problem.

The first strategic issue is: how can the U.S. and Japan integrate China into the community of nations? Here, at least, Japan and the U.S. should act much more in concert with one another. The continuing isolation of China could lead to destabilization. China could undermine world peace by transshipping Russian technology or Chinese armament to countries that are hostile to U.S. intentions, for example.

Japan is also concerned that political upheaval in China would erode Japanese investment opportunity and stunt the developing capitalism in China's populous coastal areas. Moreover, an unstable China could eventually lead to mass emigration. The specter of boatloads of Chinese refugees heading east across the Sea of Japan or the East China Sea makes the problems presented by Vietnamese and Cambodian boat people pale by comparison. That possibility makes Japan very uneasy.

Throughout the campaign, both Clinton and Perot exhorted Americans, "We can do better." Most people, including the Japanese, seem to agree. To that end, we can hope that Clinton will demand fairness in trade, but in a way that does not insult Japan by demanding it be more like us. It would be nice if he could provide a clear foreign policy and trade agenda for managing the bilateral relationship. He might even try to clean up government practices so that decision making occurs based on what is right for the nation, not by what flows from the checkbooks of Japanese lobbyists. And it wouldn't hurt if he had a definable vision of America in the new world order.

Beginning January 20th, people in Japan and in the U.S. will be eager for Clinton to begin in earnest on these formidable tasks.

Death March on Mount Hakkōda

In 1902 the Japanese army undertook a disastrous winter training exercise in which nearly a whole company of men lost their lives. This exercise is the basis for the documentary novel *Death March on Mount Hakkōda*. The author, Jirō Nitta, was an award-winning Japanese writer who remained popular until his death in 1980. In *Death March*, Nitta has woven fictional details and characterizations around a framework of actual facts and real people to create a moving story of human tragedy.

Set in the northernmost part of Honshu, Japan's main island, the story develops against a background of mounting national tension stemming from the increasing probability of war with Russia over intended spheres of influence. The Japanese military leaders realize that their troops must be trained to fight in the cold and that usable supply routes would have to be developed through harsh winter terrain should the Russians manage to cut off established roads. They recommend an exercise to see how feasible such routes would be and how well Japanese soldiers could perform under adverse winter conditions. The exercise would also provide valuable data concerning equipment needs and workable winter survival techniques. Two regiments, the 5th and the 31st, are left on their own to work out plans for a winter trek across the formidable Mount Hakkōda.

Historically, the two groups undertook completely separate exercises on the mountain, but in the novelized version they make preparations at the same time and begin their fateful marches from opposite sides, intending to meet each other somewhere along the way. The 31st plans well, sending a platoon of 38 men, and wisely utilizing local guides to help them move. The 5th, however, sends a much larger group and is hampered by the lack of a clear command chain and foolish decisions by the ranking officer, who is supposed to act only as an observer. The men of the 5th are caught in a terrible storm, and 199 of the 210 soldiers sent freeze to death as they wander, lost, about the blizzard-swept mountain. The 31st regiment survives the march and discovers some of the frozen corpses of the 5th along the way.

Although it was well known that 199 men actually died on the Hakkōda exercise, the Japanese authorities at the time suppressed many of the details to keep the nation unified behind the military. Nitta researched his book carefully and utilized reliable sources wherever possible to get a solid understanding of what really happened. He based his account for the most part on facts, but used his discretion and literary license freely to help tell the story and make his point. Since the publication of the original Japanese novel in 1971, new information regarding the march has surfaced, revealing facts often contrary to Nitta's account. It is also known that he altered or ignored some of the facts that he was aware of, but his intention never was to make the novel historically accurate. He simply wanted to use the factual story as a basis for a heart-rending tale that casts a critical eye on current Japanese society.

Nitta uses the rigid structure of the military as a parallel to Japan's vertical society. The story of the Hakkōda death march shows how powerless even competent people can be when their own ideas and intended actions conflict with the notions of superiors. Japanese society depends on group cohesion and unity, with the people at the top often making the decisions and everyone else being forced by societal pressure

週刊少年ジャンプ

Weekly Boys' Jump

With a circulation of five million, it's one of the world's best-selling weekly magazines.

by Frederik L. Schodt

Of all the manga magazines in Japan, *Shūkan Shōnen Janpu* 週刊少年ジャンプ ("Weekly Boys' Jump") is the hardest to ignore. Huge stacks of it are piled in front of newsstands and kiosks every Monday and Tuesday, and from there they are carried by hand to schools, offices, factories, coffee shops, and homes throughout the land. If you don't see someone actually reading the *Weekly Boys' Jump*, you will see advertisements for it on posters, on television, and in major newspapers. After Tuesday, you will also see copies left on subway luggage racks, stuffed in trash cans, or piled up outside houses waiting to be collected for recycling.

Weekly Boys' Jump is not only the best-selling manga magazine in Japan; with a circulation of over 5 million, it is one of the best-selling weekly magazines of any type in the world (in the United States, with a population twice that of Japan, *Time* magazine has a circulation of only around 4 million). But it is not just the circulation of *Jump* that is big. Like other major boys' manga weeklies, it is the size and shape of a large city's telephone book. Square-

backed and bound with both staples and glue, it usually has around four hundred and twenty pages.

The typical *Jump* cover is a full color explosion of popular characters, names of artists, and titles of stories—the same sort of hyperactive and garish mood one finds in pachinko parlors and discount electronics stores in Japan. Inside, there are about eight full color pages printed on slick paper, devoted to the first pages of the lead story and ads for video games and muscle-building equipment. Then there are around thirty-two pages of the lead story and more ads, printed on rough recycled white paper with black and red ink to create an illusion of color. The rest of the magazine, which contains between seventeen and eighteen serialized or concluding stories, is all recycled rough paper printed in monochrome, but the stories are visually differentiated by using paper tinted in different shades, and by using different colored inks.

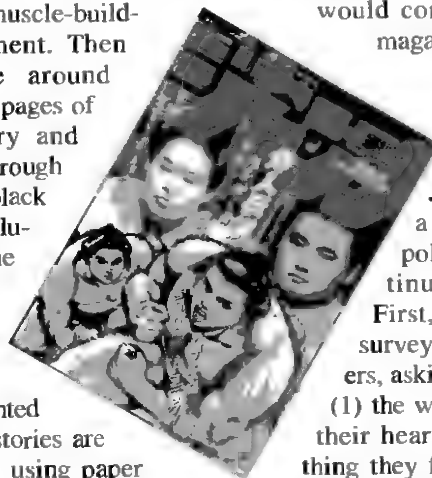

In physical structure, the *Weekly Boys' Jump* differs little from other weekly boys' manga magazines, but its popularity puts them all to shame, as it

outsells them by a factor of three or more. It was designed for late elementary and junior high school boys, but in reality it is now read by middle-aged businessmen as well.

What is the secret of *Jump's* success? The fat, weekly boys' manga format was pioneered by *Shōnen Magazine* and *Shōnen Sunday* in 1959, and *Jump* did not appear until 1968. Unable to attract the most popular artists, it instead located newer, younger ones, helped them develop their own identity, and contracted with them so they would continue with the magazine, even if they later became successful.

In addition, *Weekly Boys' Jump* established a firm editorial policy which continues to this day.

First, it conducted a survey of young readers, asking them to name (1) the word that warmed their hearts most, (2) the thing they felt most important, and (3) the thing that made them happiest. The answers were *yūjō* (友情, "friendship"), *doryoku* (努力, "effort/perseverance"), and *shōri* (勝利, "winning/victory"). These three words then became the criteria for se-

lecting all stories, whether adventure or gags. As the editor-in-chief, Gotō Hiroyuki, once commented in a June 12, 1990 article in the news magazine *Aera*, "Children know they're equal in terms of rights, but not ability. Out of ten children, perhaps one will excel in both sports and study, and one will have no interest in either. The remaining eight just want to do better in study or sports. They are the ones we're targeting, and the three words reflect their positive, optimistic outlook. At *Shōnen Jump* we don't believe in the esthetics of defeat."

This has proved a phenomenally successful formula. A steady stream of hits such as "Dr. Slump," "Cat's Eye," "Kinnikuman" ("Muscle Man"), and "Dragon Ball" have poured forth from the magazine over the years, triggering national fads, and generating millions of dollars in profit. The weekly *Jump* retails for an awesomely inexpensive 200 yen (US\$1.60), and probably just breaks even; the real profits are made from sales

of paperback compilations of the serialized stories, animation rights, licensing of toys, etc.

Among the stories currently running in *Jump* are campus love comedies, a basketball adventure, a baseball comedy, a soccer tale, and assorted fantasy and gag strips. The editorial staff keeps a close watch on the popularity of the stories. Each issue contains a reader-response card surveying preferences in stories, artists, and characters. A story that gets low ratings for ten weeks in a row is history. If the ratings stay high, however, it can run indefinitely. Old standbys like Akimoto Osamu's "*Kochira Katsushika-ku Kameari Kōen-mae Hasshutsujo*" ("This is the Police Station in Front of Kameari Park in Katsushika Ward") or Toriyama Akira's "Dragon Ball" have been running for years.

Not all the material in the *Weekly Boys' Jump* is pure entertainment. Aware of the enormous influence their

magazine has on young people in Japan, Shūeisha, the publisher, has recently undertaken what is usually the kiss of death in comics, and started including educational material. Since early this year, the magazine has featured illustrated stories about scientists around the world who have won Nobel prizes.

Having found a winning formula, Shūeisha did not hesitate to exploit it. *Weekly Boys' Jump* is now accompanied by the weekly *Young Jump*, a biweekly targeting an older audience of males, *Business Jump*, the comic "For Business Boys," and *Gekkan Shōnen Jump* ("Monthly Boys' Jump"), a 650-page monster magazine which currently serializes, among other things, a manga version of Magic Johnson and the LA Lakers' story, authorized by the NBA.

to go along. While this leads to oneness in purpose and action, it can also stifle creativity and needed criticism.

The old Japanese class system, while virtually extinct today, is also viewed critically by Nitta. Born into a lower-class samurai family himself, he frowns upon the concept that the rank of a person's birth determines status and competence. The official leader of the 5th regiment's company, Captain Kanda, made his way up the military ranks through the training corps and hard work instead of taking the usual channels available only to the higher classes. He feels some self-consciousness in this, and even though well known as a capable soldier, is looked upon with condescension and a bit of distrust by some of his superiors. Had Kanda had the full confidence of the higher ranking officers or more trust in himself, he might have been able to get his company through the difficult march with little or no loss of life. In the end, his own human weakness proves fatal for him and his men.

Nitta himself was a trained meteorologist, and describes the terrible winter conditions and the systematic breakdown and freezing of the men with clear images and sharp detail, and James Westerhoven provides a flowing and very readable translation. There are only a few things mentioned that the Western reader may not be familiar with, such as Japanese "rice cakes" (blocks of pounded rice known in Japanese as *mochi*), or the old Japanese occupation of charcoal-making, called *sumiyaki* and referred to as "charcoal burning" in the book. The Japanese version naturally uses different levels of speech to establish such feelings as deference and condescension, subtleties that are important to the story but do not translate well into English. Again, Westerhoven has done a good job of conveying the feel of these conversations by simple explanation.

The novel ends with an author's comments section, which outlines the aftermath of the disaster and informs the reader about the subsequent lives of the survivors.

The real names of the characters are provided and some of the actual facts explained. The English edition also includes a short historical background and a helpful map, as well as an informative translator's afterword that, among other things, accounts for differences between the real facts and the novel.

The popularity of *Death March* in Japan led to a successful movie in 1977. The novel's English translation is an engrossing and moving work which can be read as a simple work of fact-based fiction or used to provide some insight into Japanese society. While that society has certainly changed since the novel's first publication 21 years ago, the subtle criticisms the book levels are often still valid. The story is by its nature rather dark, but *Death March on Mount Hakkoda* provides enjoyable reading, even more so for those with an interest in Japan.

Running Japanese Software on the American Computer

by Jim Caldwell and Hotei Toshiya

Ever since computers entered the realm of international communication, people have looked for ways to ease the inherent problems of using software written for people speaking other languages. Given Japan's complex writing system, getting Japanese programs to run on U.S. computers proved to be an especially challenging task. Recently, however, two operating systems — Kanji386/AX and DOS/V — have been developed to allow users to run Japanese software on their American PCs. If you just want to have Japanese text editing capability, there are other options that are easier and cheaper, but if you want to run actual Japanese software, these operating systems provide a solution.

Two major problems arise in designing an operating system to run Japanese software on U.S. computers: the size of the Japanese writing system, and the lack of a uniform design for computers in the Japanese market. Compared to the English alphabet, the Japanese system is enormous. Considering that four alphabets are used in Japanese, including the monstrous kanji alphabet (7,000 kanji are typically available on Japanese computers), it's not surprising that computers in Japan don't handle these characters the same way that U.S. computers handle the English alphabet. While U.S. operating systems handle each English alphabet character in a single byte, the Japanese alphabet has been coded into the computer using two bytes per character (commonly known as the DBCS, or double-byte character set). On Japanese computers, these characters are stored in a chip on the logic board; on U.S. machines, the Japanese characters must be loaded from

the operating system into active memory. This leads to significant problems in switching between the two languages.

The other problem is the lack of a common standard in the Japanese computer industry. In the U.S. market, IBM pioneered the personal computer industry. When other computer manufacturers sought to enter the market, they were forced to conform to the IBM design to satisfy the demands of consumers. The creation of this standard computer platform allowed users to run the same software on any computer, regardless of the manufacturer. This, however, has not been the case in Japan. There are currently five basic software standards for Japanese PCs: NEC (called "the IBM of Japan," with 60% of the market), AX (created by about 650 of NEC's competitors to topple its market dominance), DOS/V, Fujitsu and Toshiba. Clearly, this confusion within the Japanese market makes it difficult to adapt Japanese software for U.S. computers.

Kanji386/AX and DOS/V are the two major operating systems that allow users to run Japanese programs on their American PCs. Kanji386/AX, designed by Microsoft, Sanyo and Pacific Software Publishing Corporation, runs software designed for AX computers in Japan. It comes with an English manual, is supported in the U.S. by Pacific Software Publishing and its resellers, and offers regular upgrades. Coming soon is Kanji386/AX/V, which will also run IBM DOS/V programs.

There are four versions of DOS/V available, including IBM, Compaq, Digital Research and Microsoft. Early versions of DOS/V imported from Japan

required special Japanese keyboards, monitors, printers and BIOS chips (BIOS is the software interface with the hardware). From Version 5.02 on, however, DOS/V allows the user to choose which keyboard, printer type and CPU will be used, within limits. It still has no English manual and no U.S. support. Also, IBM is coming out with DOS/V/AX, which will also run AX software.

Since the formation of the AX consortium, NEC has lost some of its PC market share. The AX standard is gaining popularity because it works across platforms. The AX system is sold mainly to corporate users, while DOS/V is sold mainly to end users. As of November, 1992 about 460,000 copies of the AX system and 120,000 copies of DOS/V have been sold. Kanji386/AX and IBM DOS/V 5.02 will configure themselves to work with normal software interface chips used in either North America or Japan. IBM's Version 5.02 will support PC/AT computers with VGA (640x480) or XGA (1024x768) monitors, a U.S. 101-key or a Japanese keyboard, and an Epson 24-pin, an IBM Proprinter or a Japanese Kanji printer, but no non-Japanese Laser Printers. Kanji386/AX can be configured for US or Japanese VGA monitors, keyboards, and 386 or better computers. Both can run MS Windows 3.0J, of which 240,000 units have been sold. Windows 3.1J may be out in March 1993.

One important point to consider is the lack of true compatibility between the two systems. Software written for one will not yet run on the other. For example, a program written for DOS/V will

POLITENESS LEVELS

Codes used in *Mangajin*

(PL4) Politeness Level 4: Very Polite

Typically uses special honorific or humble words, such as *nasaimasu* or *itashimasu*.

(PL3) Politeness Level 3: Ordinary Polite

Typified by the verb *desu*, or the *-masu* ending on other verbs.

(PL2) Politeness Level 2: Plain/Abrupt

For informal conversation with peers.

- “dictionary form” of verbs
- adjectives without *desu*

(PL1) Politeness Level 1: Rude/Condescending

Typified by special words or verb endings, usually not “obscene” in the Western sense of the word, but equally insulting.

The politeness levels found in Japanese frequently have no counterpart in English. This can cause problems for translators. The words *suru* and *shimasu* would both be rendered simply as “do” in English, but in Japanese there is a very clear distinction between the “politeness” levels of these two words. In a more extreme case, *shiyagaru* would also be translated simply as “do” in English, but in Japanese this word is openly offensive. To avoid confusion or embarrassment, we label our translations using the codes on the left.

Learning Japanese from *manga* is a good way to get a “feel” for these politeness levels. You see words used in the context of a social setting.

The danger in “picking up” Japanese is that even though most Japanese people appreciate the fact that you are interested in learning their language and will give you “slack” as a beginner, misused politeness levels can be pretty grating on the Japanese ear, even if they do not reach the point of being truly offensive.

How can I be safe? Politeness Level 3 can be used in almost any situation. Although it might not be completely natural in a very formal situation, it will not cause offense. If you want to be safe, use PL2 only with friends and avoid PL1 altogether.

These levels are only approximations: To simplify matters, we use the word “politeness,” although there are actually several dimensions involved (formality, deference, humility, refinement, etc.). While the level of respect (or lack of it) for the person spoken to or spoken about can determine which words are used, verb forms are determined largely by the formality of the situation. Thus, it is difficult to label the verb *irassharu* (informal form of an honorific verb) using this simple four-level system. In such cases we sometimes use combined tags, such as (PL4-3).

Rather than trying to develop an elaborate system which might be so confusing as to actually defeat the purpose, we feel that this system, even with its compromises, is the best way to save our readers from embarrassing situations.

PRONUNCIATION GUIDE

Pronunciation is probably one of the easier aspects of Japanese. Vowel sounds don’t vary as they do in English. While English uses the five letters a, e, i, o, u to make 20 or so vowel sounds, in Japanese there are 5 vowels and 5 vowel sounds—the pronunciation is always constant. There are only a few sounds in the entire phonetic system which will be completely new to the speaker of English.

The five vowels in Japanese are written a, i, u, e, o in *rōmaji* (English letters). This is also the order in which they appear in the Japanese kana “alphabet.” They are pronounced:

- a like the *a* in father, or ha ha!
- i like the *i* in macaroni
- u like the *u* in zulu
- e like the *e* in get, or extra
- o like the *o* in solo

The length of time that a vowel sound is held or sustained makes it “long” or “short” in Japanese. Don’t confuse this with what are

called long or short vowels in English. The long vowel in Japanese has exactly the same pronunciation as the short vowel, but it’s held for twice as long. Long vowels are designated by a dash over the vowel (*dōmo*, *okāsan*), or by repeating the vowel (*iimasu*).

The vowels *i* and *u* are sometimes not fully sounded (as in the verb *desu* or the verb ending *-mashita*). This varies between individual speakers and there are no fixed rules.

Japanese consonant sounds are pretty close to those of English. The notable exception is the *r* sound, which is like a combination of the English *r* and *l*, winding up close to the *d* sound. If you say the name Eddie and touch the tip of your tongue lightly behind the upper front teeth, you have an approximation of the Japanese word *eri* (“collar”).

Doubled consonants are pronounced by pausing just slightly after the sound is formed, and then almost “spitting out” the rest of the

word. Although this phenomenon does not really occur in English, it is somewhat similar to the *k* sound in the word bookkeeper.

The *n* sound: When it is not attached to a vowel (as in *na, ni, nu, ne, no*), *n* is like a syllable in itself, and as such it receives a full “beat.” When *n* is followed by a vowel to which it is not attached, we mark it with an apostrophe. Note the difference between the word for “no smoking,” *kin'en* (actually four syllables: *ki-n-e-n*) and the word for “anniversary,” *kinen* (three syllables: *ki-ne-n*).

The distinctive sound of spoken Japanese is partly due to the even stress or accent given to each syllable. This is one reason why pronunciation of Japanese is relatively easy. Although changes of pitch do occur in Japanese, in most cases there are not essential to the meaning. Beginners are probably better off to try for flat, even intonation. Rising pitch for questions and stressing words for emphasis are much the same in English.

フリテンくん Furiten-kun

Title: 非常口
Hijōguchi
Emergency Exit

- *hijō* means "emergency," and the suffix *-guchi*, from *kuchi* ("mouth/opening"), indicates a point of entrance or exit.

1

Employee: 火事 だー!!
Kaji da—!!
fire is
"Fire!" (PL2)

2

Employee: 火事 だー!!
Kaji da—!!
fire is
"Fire!" (PL2)

Furiten-kun: 社長 火事 です!!
Shachō, kaji desu!!
company president fire is
"Sir, there's a fire!" (PL3)

- *kaji*, combining the kanji for "fire" and "thing/situation/incident," refers specifically to a fire that has broken out where it should not. The word is not used for the kind of fire one builds to serve some purpose.
- 社長 *shachō* combines the second kanji of 会社 *kaisha* ("company") with the suffix for indicating the "head/chief/leader" of a group, 長 *chō*, to give the meaning "company president." Japanese employees traditionally address their superiors by their titles rather than by name, although many companies are beginning to encourage greater use of personal names in order to de-emphasize hierarchy.

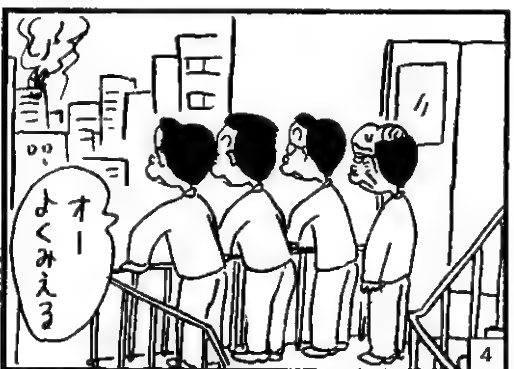

3

President: どこ から 出火した んだ
Doko kara shukka shita n da?
where from fire broke out (explan.-?)
"Where did it break out?" (PL2)

Sign: 非常口
Hijōguchi
Emergency Exit

- *shukka* combines kanji meaning "come/go out" and "fire," for a word meaning "outbreak of fire." *Shukka shita* is the plain/abrupt past tense of the verb form, *shukka suru* ("[fire] breaks out").
- asking a question with *da* or *n da* is masculine and can sound very rough. Here it carries more the feeling of urgency than of roughness.

4

Employee: オー よくみえる
O, yoku mieru.
(exclam.) well can see
"Wow! We can see it really well." (PL2)

- *yoku* ("well") is the adverb form of the adjective *ii/yo* ("good/fine").
- *mieru* means "can see/is visible," and can refer either to the viewer's own ability to see, or to the clarity/visibility of the object being viewed.

Lesson 22 • The Wide World of *Desu*

One of the first things students of Japanese learn is that *desu* means “am/is/are,” as in *Kore wa MANGAJIN desu*, “This is *MANGAJIN*.” In relatively quick order they learn that *desu* can follow adjectives as well, as in *MANGAJIN wa omoshiroi desu*, “*MANGAJIN* is fun/interesting.” Then somewhere along the line they might learn that, in the right context, they can also say *Watashi wa MANGAJIN desu*, which looks very much like “I am *MANGAJIN*,” without eliciting snickers.

The use of *desu* in Japanese is quite a bit broader than (or at least it spreads across very different territory from) the use of the verb “to be” in English, and that is what makes it possible for a person to say *Watashi wa MANGAJIN desu*, for example, in a situation where he is being asked to make a choice. Depending on exactly what kind of choice is being made, the situation changes the meaning of the sentence to “I select/I vote for/I want/I will buy *MANGAJIN*” (nothing subliminal here).

In such cases the meaning is usually clear from the context, and most students have little difficulty comprehending, but it’s a little more difficult to know when you can, or even should, use *desu* instead of a more active verb to make your Japanese sound natural. For that reason, in this lesson we focus on situations where English speakers might not think of using *desu*. We need to caution that it’s not something that works by formula, so you will need to keep your ear tuned to what native-speakers are saying. Hopefully the examples we present will help you get your ear tuned in the right direction.

All of the examples we’ve chosen have some kind of a noun followed by *desu*—or *da*, its PL2 equivalent—and in each case *desu* means more than just “am/is/are.” Stretching for a single principle that pulls them all together, we could say that the noun in each case describes a situation or condition that applies to the speaker or to the person being spoken of. Even though many of the examples use the PL2 *da*, don’t forget that in most cases the PL3 *desu* is the safer choice unless you’re really sure it’s a situation where you can be informal.

We begin with three examples in which an American speaker is likely to say “have.”

Describing a person's condition or situation

The man was having trouble finding the right words, and the woman started to get her hopes up. But instead of confessing his love or proposing, he tells her he has AIDS—using *desu*. It’s a situation where an English speaker would expect to use the verb “have,” but to use *motte-iru* (“have/carry”), *aru* (“have/exists/there is”), or any of the many other equivalents an English-Japanese dictionary gives for “have” would sound odd in this case.

Man: ボク は エイズ です。

With the explanatory *na no*

Explaining that he has a date tomorrow, Tanaka-kun is about to ask his friend a favor. The explanatory *no* becomes *na no* when it directly follows a noun like this.

© Tanaka Hiroshi / Tanaka-kun, Take Shobō

Tanaka-kun: 明日 デート なんだ けど さー
Ashita dēto na n da kedo sū
 Tomorrow date (explan.) is but/and (emph.)
 “I have a date tomorrow, and . . .” (PL2)

Friend: おっ! カノジョ できた のか
O! Kanojo dekita no ka
 oh girlfriend was made (explan.-?)
 “Oh! Did you make/find a girlfriend?” (PL2)

- the conjunction *kedo* literally means “but,” but when used at the end of a sentence this way (to set up background information and lead to the next part of the conversation), it seems to function like the English “and.”
- *kanojo* is actually a pronoun for “she/her,” but it is also used colloquially as a common noun meaning “girlfriend.”

Making a choice

In a coffee shop the waiter comes to take their orders. There are of course other ways to place an order, but this *Edokko* (“child of Edo” → “native Tokyoite”) uses one of the simplest ways to state his choice. Stating a personal choice or position can be thought of as a variation of describing one’s own situation.

Waiter: ご注文 は?
Go-chūmon wa?
 (hon.)-order as for
 “Your order?” (PL3-4 implied)

Man: おいら ブラジル だ
Oira Burajiru da.
 I/me Brazil am/will be → will have
 “I’ll have Brazilian” (PL2)

- *oira* is a masculine slang word for “I/me,” a somewhat softer variation of the rough *ore*.

© Tachibanaya Kikutarō / Beranmei Tōchan, Take Shobō

Telling someone where you are

A place name followed by *da/desu* is a common way of indicating where someone is—including where the speaker himself is when talking on the phone. In this example, the first *desu* is a standard “is/are,” but the second one means “[you] are at/in . . .” Words like *ima* (“now”), *mada* (“now still”), and *mō* (“now already”) are often included in such sentences. Here, Department Head Haruyama has inadvertently spoken with disrespect to the president of the company over the phone, and the shock of realizing his mistake has put him in a daze.

Haruyama: 私 は 誰? 今、どこ?
Watashi wa dare? Ima, doko?
 I/me as-for who now where
 “Who am I? Where (am I) now?”
 (PL2)

Subordinates: 春山 部長 です。
Haruyama Buchō desu.

 “You are Department Head Haruyama.”
 (PL3)

今 会社 デース!!、
Ima kaisha de-su!!
 now company/office/work are at
 “Right now you are at the office.” (PL2)

- *kaisha* is literally “company/firm” but is often used in situations where it is more natural to say “the office” or “work” in English.

Asking where someone is

You can ask someone’s whereabouts by using the same pattern in a question. The gourmet seen here has just sampled a new dish developed by Mr. Sanjay and he wishes to know the whereabouts of the chef so that he can offer his compliments.

© Okazaki Jirō / *Afutō Zero*, Shogakukan

Gourmet: 素晴らしい 出来栄 です ね。

Gourmet: サンジェ氏は まだ 厨房 ですか?
Sanje-shi wa mada chūbō desu ka?
 Sanjay Mr. as-for still kitchen is?
 “Is Mr. Sanjay still in the kitchen?”
 (PL3)

- *dekibae* refers to how well something has been made: “workmanship/manner of execution.”
- *chūbō* is a word for “kitchen” that has a certain archaic and/or aristocratic flavor. The more common word today is 台所 *daidokaro*, or even キッチン *kitchin*, from the English word.

Butler: 今、お呼びします。
Ima, o-yobi shimasu.
 now -call/summon
 “I will call him right away.” (PL3-4)

- *o-yobi shimasu* is a polite/humble form of *yobu* (“call/summon”).

Asking where someone is going

A place name followed by *da/desu* is also a way to say where a person is about to go instead of where he is at the moment. In this scene Kōsuke asks the student who lives in the apartment next door if he is going to school.

© Maekawa Tsukasa / *Dai-Tōkyō Binbō Seikatsu Manyūaru*, Kōdansha

そのあと コンパ なん です。
sono ato konpa na n desu.
 afterward party (explan.) is
 “I’m going to watch the Waseda-Keiō rugby game, and afterwards there’s a party.” (PL3)

- *Sōkei* is made up of the first characters of 早稲田 Waseda and 慶応 Keiō, the two top private universities in Tokyo, and traditional sports rivals.
- drinking is usually the primary activity at a *konpa*. The generic word パーティー *pātī* is also used in Japanese.

For an action about to occur

When *desu* follows an action noun it can indicate that you are about to begin that action/activity. Such sentences often start with an expression that implies impending action, such as *sā* (“well now”), *sassoku* (“immediately/right away”), *mō sugu* (“soon”), *ima kara* (“from now”), etc. These two innocent-looking characters are contemplating some mischief upon a *yakuza* (“gangster”) they have been observing.

Pūtārō: さっそう 実験 だ!
Sassoku jikken da!
 right away experiment is
 “Let’s do an experiment right away!” (PL2)

As a kind of shorthand . . . for wearing something

Da/desu after almost any noun can serve as a kind of shorthand to indicate an action associated with that object. From the few examples that we present here you can probably see that the possibilities of what *da/desu* can stand for are nearly unlimited. In this first case, *da* effectively means “wear.”

 ocean to mountain to
“To the beach! To the mountains!”

... for saying “goodbye”

This one is a little different from our other “shorthand” examples, but it still fits that description. In Basic Japanese 11 we introduced *Osaki ni shitsurei shimasu* (literally, “I will do the rudeness of leaving first/before you”) as the appropriate way to say “good-bye” when leaving the office before all the rest of your co-workers. One of several ways to shorten that “goodbye” is the way this OL does when her boss tells her he has to stay to finish up a little more work.

OL: そいじゃ お先 です。
Soi ja o-saki desu.
 in that case (hon.)-first/before am/is
“Well, then, goodbye.” (PL3 informal)

- *soi ja* is a contraction of *sore de wa*, “in that case/well then.”

“Ow ow ow.”

2

Tōchan: お〜頭がいてえ...
O~ atama ga itē
ohh head (subj.) is painful/hurts
“Ohh, my head aches.” (PL2)

Co-worker: ハハア、タメさん 二日酔い だろ。
Hahā, Tame-san futsukayoi daro?
aha (name-hon.) hangover right?
“Aha. You have a hangover, don't you?” (PL2)

- the vowel combination *ai* changes to *ē* or *ei* in certain dialects and masculine slang, including the speech of *Edokko* (“children of Edo” = “native Tokyoite”) like Tōchan. *itē* is Tōchan's way of saying *itai* (“is painful”).
- futsukayoi* is literally “two-day drunkenness,” referring to how a drunken binge affects one the next morning → “hangover.”
- daro* is a colloquially shortened *darō* (“is probably”), here being used as a question with an accusing tone.

3

Tōchan: べらぼうめいっ!
Berabōmei!
“Ridiculous!” (PL1)

Tōchan: 江戸っ子が そんな みっともない こと
Edokko ga sonna mittomonei koto
child of Edo (subj.) that kind of unseemly/disgraceful thing
できる けいっ!
dekiru kei!
can do (?)
“How could a child of Edo do anything so disgraceful?” (PL2)

- berabōme(i)!* = “idiotic/ridiculous/outrageous.” It is generally associated with *Edokko* speech.
- mittomonei* = *mittomonai*, and *mittomonai koto* = “unseemly/disgraceful thing.” This is the object of the verb *dekiru*, meaning “can do.”
- dekiru kei* = *dekiru kai*, in which *kai* is a colloquial version of the question particle *ka*. The question is rhetorical: “Can an *Edokko* do something so disgraceful? Hardly.”

4

Tōchan: きんのう 夫婦 ケンカで
Kinō fūfu -genka de
yesterday husband and wife fight/argument in
かーちゃんに なぐられた んでいっ!
Kāchan ni nagurareta n dei!

“I got hit by my old lady yesterday in a fight.” (PL2)

Co-worker: その方が よっぽど みっともねーよ。
Sono hō ga yoppodo mittomoneē yo.
that (comparison) very much/greatly unseemly (emph.)
“That's a lot more disgraceful.” (PL2)

- kāchan* is an informal equivalent of *okāsan* (“mother”), and it is often used by Japanese men in the same way American husbands address or refer to their wives as “Mother/Mom.” When not used for direct address, it can have the feeling of “my old lady.”
- nagurareta* is the past form of *nagurareru* (“be hit/beat”), from *naguru* (“hit/beat”).
- n dei* = *n dai*, a strongly assertive form of the explanatory *n(o) da*. The small *tsu* at the end reflects how forcefully he is saying it.
- ... *no hō ga* is attached to the greater of two items being compared.
- yoppodo* is a colloquial *yohodo* (“very much/greatly”).

1

Salesman: 電話機 ですか?
Denwa-ki desu ka?
telephone instrument is it?
"You're looking for a telephone?" (PL2)

Tōchan: うん。
Un.
"Uh-huh." (PL2)

- ki means "machine/apparatus/instrument" and is a suffix used in the names of a wide variety of mechanical and electronic equipment.
- the salesman literally asks "is it a telephone?" meaning "is it a telephone that you are looking for/interested in buying?" See Basic Japanese.

2

Salesman: こちらは留守番や転送機能がついて便利ですよ。
Kochira wa rusuban ya tensō kinō ga tsuite benri desu yo.
this direction as-for answering machine & call forwarding functions (subj.) are attached-and convenient is (emph.)
"This one comes with answering machine and call forwarding features and is very convenient." (PL3)

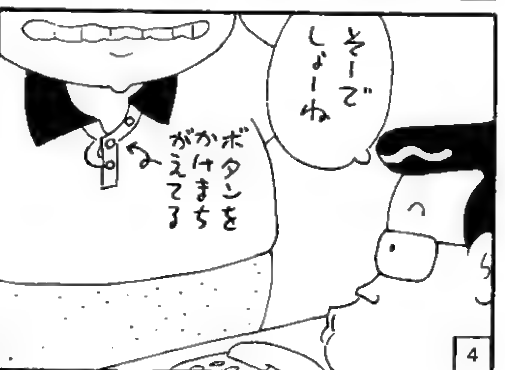

- kachira literally means "this direction," but is being used here as an indirect (and therefore more polite) way of saying "this one."
- rusuban refers to watching the house when everyone else is away, and he is saying the phone can serve this function — i.e., it includes an answering machine. The standard Japanese word for a telephone answering machine is *rusuban denwa*.
- kinō = "functions/abilities/features"
- tsuite is the -te form of *tsuku* ("stick/be attached to"); the verb is often used when referring to features included in appliances/cars/apartments/etc.
- yo is an emphatic particle used especially when asserting/revealing something you think your listener doesn't know.

3

Tōchan: おいらこーゆうボタンがたくさんついてるやつは苦手なんだよ。
Oira kāyū botan ga takusan tsuiteru yatsu wa nigate na n da yo.
I/me this kind of buttons (subj.) many attached things/ones as-for weak/not good at (explan.) (emph.)
"I'm not much good at things that have a lot of buttons like this." (PL2)

- oira* can be thought of as a variation of *ore*, an informal/rough, masculine word for "I/me."
- the irregular spelling こーゆう *kōyū* for こういう *kā-iu* ("this kind of") is probably intended to reflect his *Edokko* accent.
- yatsu* is an informal word for "fellow/guy," but it's used idiomatically to refer to "thing(s)/situation(s)/case(s)."
- na n(o da/desu)* is the form the explanatory *no (da/desu)* takes after nouns/pronouns and certain particles. It can be thought of as literally meaning "It's that.../the situation is that..."

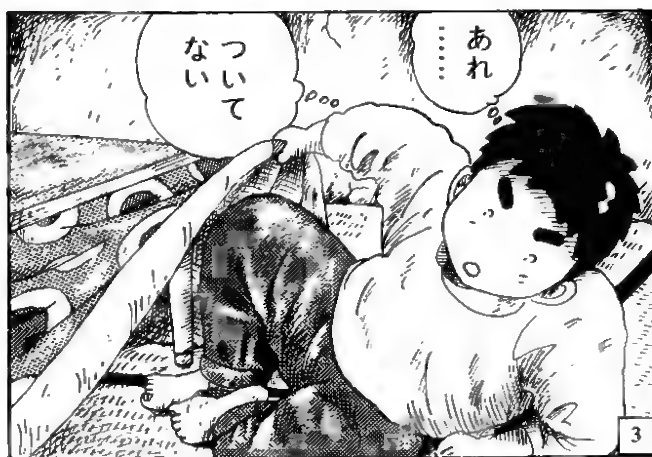

4

Salesman: そうでしょーね。
Sō deshō ne.
that way probably is isn't it?
"I suppose so." (PL2)

Note: ボタンを掛けまちがえてる。
Botan o kakemachigaete-ru.
button (obj.) has misfastened
He has misfastened his buttons. (PL2)

- kakemachigaete-(i)ru* is from *kakemachigaeru* ("misconnect/misfasten"). *Machigaeru* ("make a mistake/goof up") can be used as a verb suffix indicating that an action was done in an inappropriate/undesirable manner.

Title: 第77 話 コタツ を 出す
Dai Nanajūnana wa Kotatsu o dasu
 No. 77 story: kotatsu (obj.) take/put out
Story No. 77: Getting Out the Kotatsu

- the *kotatsu* is a wintertime fixture in most Japanese houses: a low frame with a heating element underneath, a quilt draped over it, and a square board placed on top as a tabletop. Because it's for keeping one's legs and feet warm, some have called it a "foot warmer" in English, while others have called it a "warming table." These English terms both raise considerably different images, though, so we've decided it's best to leave the word untranslated.

Narration: 11月 に入り 寒くなってきた。オレ は 電気ゴタツ を 出した。
Jūichigatsu ni hairi, samuku natte kita. Ore wa denki-gotatsu o dashita.
 November entered-and started to become cold I/me as-for electric kotatsu (obj.) took/put out.
We got into November, and it started to get cold. I got out my electric kotatsu. (PL2)

- *hairi* is a continuing form of *hairu* ("enter"), meaning "enters/entered and . . ." This could be translated as "November came, and . . ."
- *samuku* is the adverb form of *samui* ("cold").
- *natte* is the *-te* form of *naru* "become," and *kita* is the past form of *kuru* ("come"). A form of *kuru* after the *-te* form of a verb is used both for an action beginning and for a progressive change, so *samuku natte kita* can be thought of literally as "started to become progressively colder" → "started to get cold."
- strictly speaking, *denki* means "electricity," but it is also used widely as an adjective: "electric/electrical."
- in combinations, *kotatsu* becomes *-gotatsu* for euphony. Today, most *kotatsu* are electric models with infra-red heat lamps attached to the underside of the frame's top (see frame 10); they can be placed wherever one wishes in a room, directly on the floor/*tatami*. In the traditional *hori-gotatsu* (literally, "dug kotatsu"), a permanent "pit" was "dug"/constructed in the floor to allow occupants on all sides to comfortably dangle their legs, and a charcoal firepan was placed in the bottom of this pit. Modern *hori-gotatsu* usually replace the firepan with an electric heat lamp, so they, too, could be called *denki-gotatsu*, but most people use this term for the moveable variety only.
- *dashita* is the plain/abrupt past form of *dasu* ("take/put out").
- the artist's style of never using punctuation in his narration creates an ambiguity that makes it also possible to read the narration as a single sentence, with *samuku natte kita* modifying *ore* ("I/me"). We might then translate: "Having begun to get cold now that it was November, I got out my kotatsu." But the way the author breaks the lines seems to suggest it should be read as two sentences.

3

Kōsuke: あれ . . . ついてない。

Are . . . Tsuite-nai.
 hunh? not turned on/lit.

"Hunh? . . . It's not on." → **"Hunh? . . . It didn't come on."** (PL2)

- *are* is an interjection of surprise/bewilderment when something does not go as expected.
- *tsuite-nai* is a contraction of *tsuite-inai*, the negative of *tsuite-iru* ("is [turned] on" when speaking of lights and certain electrical appliances). In this case, his surprise shows that it is turned on, but it "didn't/hasn't come on."

Sound FX: カチ カチ
Kachi kachi
Click, click (or, Snap, snap)

On Switch: 入
(Ireru)
 put in
On

- *kachi* is the standard sound for the “click/snap” of a spring-loaded switch. It’s also used for the ticking of clocks.
- the verb for turning a switch “on” is 入れる *ireru* (“put in”), as in *suitchi o ireru*, so the kanji 入 is sometimes used on appliances to indicate “on.” Normally no one actually “reads” such indicators out loud, but if someone had reason to do so (e.g., when discussing the two sides of a broken switch) he would probably read it *ireru*.

5

Sound FX: カチャカチャ
Kacha kacha
Click, click (or, Snap, snap)

On Dial: 弱 中
Jaku Chū
 weak middle
Low Medium

- *kacha* gives the feeling of a “looser” click than *kachi*, more like a cross between a click and a rattle. He is turning the dial of the thermostat. The right side of the dial would read 強 *kyō*, literally, “strong” → “high.”

6

Sound FX: カタカタ
Kata kata
Rattle, rattle (a rattling/shaking effect)

7

Kōsuke: うーむ
U—mu
“Hmm...”

Sound FX: カチ カチ カチ

8

On Switch: 切
(Kiru)
 cut
Off

- the verb for turning a switch “off” is 切る *kiru* (“cut/cut off”), as in *suitchi o kiru*, so the kanji 切 is used on appliances as the counterpart to 入. Again, normally no one would actually “read” the kanji out loud.

9

Kōsuke: スイッチは 何ともなさそう だな ...
Suitchi wa nan to mo nasasō da na
 switch as-for seems unaffected/okay (colloq.)
“There doesn’t seem to be anything wrong with the switch.” (PL2)

- *suitchi* is a katakana rendering of the English “switch.”
- *nan to mo nai* is an expression meaning “there is nothing wrong/no problem(s),” and *nan to mo nasasō da* means “there seems to be nothing wrong,” or, “it seems/appears to be okay.” The ending *-so da/desu* on an adjective or verb indicates that’s how it seems/appears, based on the speaker’s observation.
- *na* is used as a kind of self-check/confirmation when speaking/thinking to oneself: “seems okay, right?”

本日 休業
Honjitsu kyūgyō
today resting from work/operations
Closed Today

Kōsuke: あー
Ā—
(sigh of disappointment)
“Ahh.”

- 器 (read *ki* in combinations and *utsuwa* by itself) originally meant “container/vessel,” but in combinations it took on the additional meaning of “tool/apparatus.” So *denki*, when written 電器, means “electrical apparatus” — which includes electrical appliance(s) and accessories of all kinds.
- *honjitsu* sounds more formal than *kyō* (“today”); it’s the preferred word for “today” on signs/fliers and in public announcements.

13

Kōsuke: あと は 商店街 まで 出ないと たぶん ない な ...
Ato wa shōtengai made denai to tabun nai na ...
remainder/other than this as-for shopping district as far as if don’t go out probably not exist (self-confirm.)
“Besides this there probably isn’t (another appliance shop) unless I go all the way to the shopping district.” (PL2)

- *ato* is literally “after” but often means “the rest/the remainder/the others.”
- *denai* is the negative form of *deru* (“go/come out”), and *to* after a verb gives a conditional “if/when” meaning, so *denai to* means “if [I] don’t go out” → “unless [I] go out.”

14

Garbage Man: アレ? それ 粗大 ゴミ?
Are? Sore sodai gomi?

Kōsuke: いえ...
ie...
“No.” (PL2)

Sound FX: ガー ガー
Gā gā
RRRR, RRRR (sound of machinery — in this case of the compactor on the garbage truck)

- *sodai gomi* is the generic term for large/oversized items, such as furniture or appliances, thrown out as trash. Most Japanese cities have special days designated for curbside pick-up of such items.
- *ie* is a short, informal *ie* (“no”).

Kore de kotoshi no fuyu mo junbi okkē da.
this with this year 's winter also preparations okay/finished is/are

Now I'm ready for the coming winter. (PL2)

- *kore* = “this” and *kore de* means “with this/having done this” → “now.”
- *junbi okkē* means “preparations are complete.” “OK,” pronounced either *okkē* or *ōkē*, can be considered a fully naturalized word in Japanese, and is most often written this way in Roman letters rather than in katakana.

not run on the Kanji386/AX system. Fortunately, Windows-J has been designed to accommodate the differences between the two systems, and if it is installed, Windows-J software designed for either system will run.

Currently, to run in English mode, IBM's DOS/V requires a reboot. Kanji386/AX allows the user to switch to English DOS without rebooting; standard English programs will run if there is enough memory with the kanji loaded.

Since Kanji386/AX is installed by software through the Config.sys file, it can also be removed entirely from the computer's memory by rebooting.

In sum, both operating systems enable U.S. standard PCs with a 386 processor, 2 Megabytes of RAM (4 MB minimum for Windows-J) and VGA monitors to run Japanese software.

Availability of software is about the same for both systems, and since Windows-J software will run in Windows-J

on either system, there is little difference in that respect. The availability of an English manual and U.S. technical support currently makes Kanji 386/AX the more attractive choice for American users who need to run Japanese software.

After Zero, Short Short

After Zero, Short Short

The series *After Zero* has been running in *Big Comic Original* for a couple of years. It started as a regular "feature length" manga of 20+ pages, but now most of the stories are 7-8 pages, and the title has been changed to *After Zero, S.S.*, with the reading *Shōto Shōto* ("Short Short") given over S.S. The stories always feature a science fiction or supernatural theme.

Title: *Toki no Mukōgawa*
The Other Side of Time

Author: Okazaki Jirō

Narrator: *Itsumo no yō ni boku wa shūten no eki no esukarētā ni nori, udedokei o mite-iru.*

Narrator: *Genzai, gozen hachiji sanjupun o sanbyō sugita tokoro.*
It is now just three seconds after 8:30 AM. (PL2)

Narrator: *Tsugi ni kakō-yō esukarētā no hitobito ni shisen o utsusu.*
Next I shift my gaze over to the people on the down escalator. (PL2)

- *shisen* (lit. "sightline") refers to the direction of one's gaze.

Narrator: *Mitamae! Sono hitobito no udedokei ga sashishimesu jikan wa...*
Look! The time to which their watches point is ...
→ Look! The time their watches indicate is ... (PL2 implied)

- *sashishimesu* combines *sasu* ("point toward") and *shimesu* ("indicate/show"). The verb is more closely associated with analog clocks/watches, but continues to be used sometimes with digital time devices.
- the sentence is completed by the illustration in the next frame.

Title: 美容院へ通う男
Biyō-in e Kayou Otoko
beauty parlor/hair dresser to commute/frequent man
The Man Who Frequents a Beauty Parlor

- *kayou* essentially means "go back and forth" and refers to commuting to work, school, or any other place one goes on a regular/frequent basis.
- *biyō-in e kayou* is a complete thought/sentence ("[he] frequents a beauty parlor") modifying *otoko* ("man"). In actual speech, it can be difficult to distinguish between 美容院 *biyō-in* and 病院 *byōin* ("hospital"), a rather significant difference, so it's important to stress the second syllable of *biyō-in* and avoid running it together with the first syllable.

Signs: 美容室 トミ
Biyō-shitsu Tomi
beauty salon/hair dresser (name)
Beauty Salon Tomi

FX: せっせ せっせ
Sesse sesse
(effect of doing an action busily/earnestly)

- *biyō-shitsu* and *biyō-in* are essentially interchangeable just like English "beauty salon/beauty parlor." There was a time when haircutting establishments were effectively segregated between the sexes, with men going only to *toko-ya* ("barbershops"), but this is no longer the case today.

everyday earnestly is commuting apparently (emph.)
"Tanaka-kun apparently fell in love at first sight with a girl (who works) at the beauty parlor, and he's going there every day in earnest." (PL2)

- the particle *wa* for marking the topic/subject has been dropped after *Tanaka-kun*. This is quite common in colloquial speech.
- *hitomebore shite* is the *-te* form of *hitomebore suru*, "to fall in love at first sight." *Hito-*, a prefix meaning "one/a single -", combines with *me*, meaning "eye," to make *hitome*, which can mean either "one eye" or "one look/glance"; *-bore* is from *horeru* ("fall in love/become infatuated with").
- adding *-to* to the FX word *sesse* makes it an adverb, "busily/earnestly."
- *rashii* shows that the speaker is making a judgment/conjecture based on something he/she has seen/heard: "apparently/it seems."

Tanaka-kun: もう 切る毛がないな...
Mō kiru ke ga nai na...

"I don't have any hair left to cut." (PL2)
しばらく行けないな...
Shibaraku ikenai na...
for a while cannot go (self-confirm.)
"I can't go for a while." (PL2)

- *kiru ke* means "hair to cut": hair that has already been cut. "cut hair," would use a past form.
- *na* is used as a kind of self-check/confirmation when speaking/thinking to oneself: "that seems to be the case, doesn't it?"
- *ikenai* is the negative form of *ikeru* ("can go") from the verb *iku* ("go").

Diary of a Fishing Fool

The series *Tsuri-Baka Nisshi* began in 1980 in ビッグコミック オリジナル *Big Comic Original*, a twice-a-month comic magazine from Shōgakukan. It has been running continuously ever since, and has been compiled into 32 単行本 *tankōbon*, collections in book form. Shōchiku, the movie people who bring you *Tora-san*, made a movie from the series which proved so successful that No. 5 is being released early in 1993.

There are several characters in this manga series who could be considered *tsuri-baka*, but the main "fishing fool" is Hamasaki Densuke. (Although it's usually pronounced Hamazaki, he insists on pronouncing his name Hamasaki as it is in his native Kyushu).

In the beginning of the series, Hamasaki is portrayed as a man with a job, a home, and a wife, but no life to speak of. He shows no ambition in his work; he shies away from drinking with his friends because they make him sing *karaoke*; golf and mahjongg seem like too much trouble; he once belonged to a *shōgi* chess club, but quit playing because he was always being beaten by pre-teen players.

On weekends he just lies around the house. His wife urges him to find a hobby, partly because she knows socializing through hobbies can help with career advancement. With a child on the way, she is becoming increasingly concerned about their future. When he is invited fishing by his boss, Sasaki-kachō, she is elated.

Sasaki, the *kachō* (section chief), knows a lot about fishing, and is his usual arrogant self as he instructs Hamasaki in the finer points; but Hamasaki winds up catching all the fish. He has finally found something he does well. While some salarymen might be embarrassed to show up their boss this way, Hamasaki loves every minute. He becomes a "fishing nut," and everything else in his life becomes secondary to this hobby.

This situation of the subordinate having a leg up on the boss (and the nerve to gloat about it) is apparently appealing to a lot of Japanese salarymen. Also, the fact that Hamasaki remains totally disinterested in "getting ahead in the world" is surely one of his more endearing qualities among people who might feel they are being forced by social pressures into running the old rat race.

One of the twists that has made this series so popular is that through a strange quirk of fate, bottom-of-the-ladder salaryman Hamasaki becomes a fishing mentor to the president of his company, Suzuki. Hamasaki never hesitates to treat the president as his “apprentice,” and although they both maintain a modicum of politeness in their speech, Hamasaki frequently addresses the president using abrupt/informal speech.

Hamasaki typically addresses the president as Sū-san (Su, from Suzuki), and the president calls Hamasaki Hama-chan.

This relationship between Hamasaki and the president is featured more prominently in the movies than in the manga.

A comparison of characters

Casting seems to have done a good job of matching actors to the manga characters; or, we could say that the artist, Kitami Ken'ichi, has done a good job of capturing real personality types in his manga art.

Hamasaki and Sasaki-kachō:

in the manga,

in the movie.

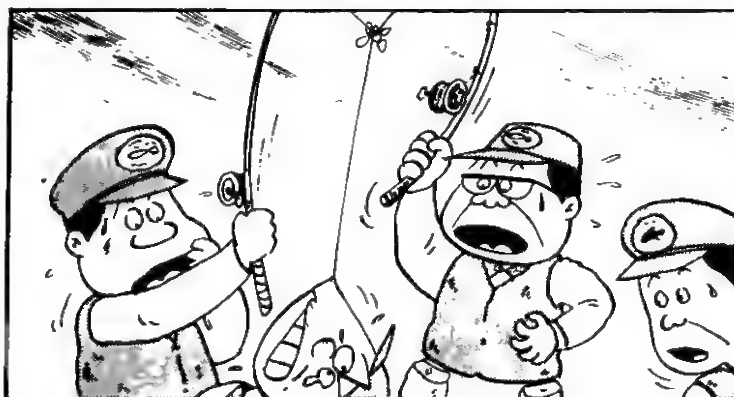

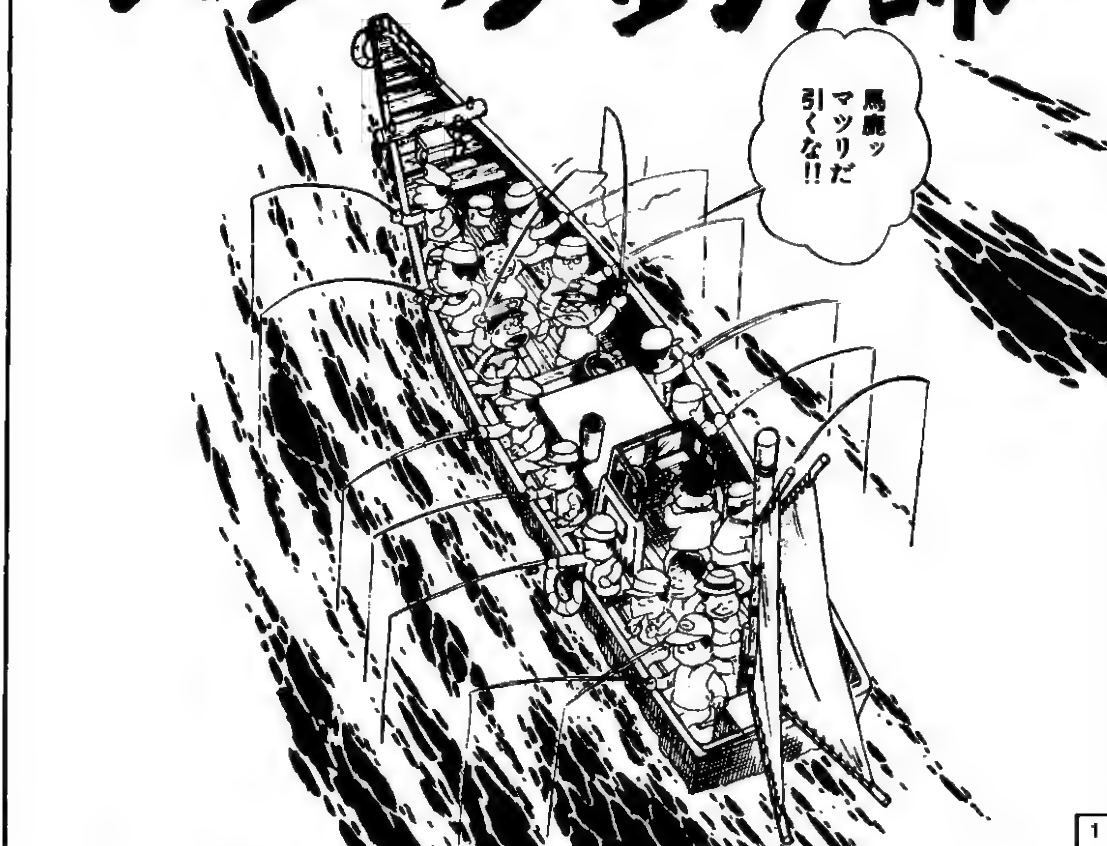

A note on the format

Because of the realistic language, authentic settings, and amusing characters, we had been planning to feature this series for some time. The problem had been that on many of the pages there are 10 or more frames, all with dialog. This is more than we can get on one page with our usual format of translation and notes. In order to use this manga, we had to cut out the top line (kanji and kana) on some of the pages. Rather than cut this out uniformly and be consistent in the format, we decided to leave in the top line of Japanese wherever there was space. So, the format changes from page to page in this story, but we hope you'll agree it's worth it.

Title: 第7章 ワン カップ 釣り師
Dai nana-shō Wan kappu tsurishi
 No. 7 chapter one cup fishing master
Chapter 7: "One Cup" Fisherman

Sasaki: 馬鹿ッ マツリ だ 引く な!!
Baka! Matsuri da. Hiku na!!
 idiot/fool tangle is/are pull/draw (prohibition)
"Idiot! It's tangled. Don't pull." (PL2)

- *wan kappu* is a katakana rendering of English "one cup," and refers to inexpensive sake packaged "ready to drink," in glasses of about 180 ml. (6 fluid oz.) with an aluminum seal across the top, often sold in vending machines.
- *tsuri* is the noun form of *tsuru*, "to fish," so *tsuri* = "fishing/angling." The suffix *-shi* means "teacher/master/expert of -," so *tsurishi* can be thought of not just as "fisherman" but "expert fisherman." The significance of this title will become clear in the second episode of the story, in the next issue of MANGAJIN.
- *matsuri* is strictly speaking a noun, from the verb *matsuwaru* ("become coiled around/tangled with [something]"); *matsuri da* = "It's a tangle" → "It's tangled."
- *na* directly following the "dictionary form" of a verb makes a fairly strong prohibition/negative command, "don't -/stop -."

2

Narration: 釣りの ベテラン は 各々 一家言 を 持っている もの であります。
Tsuru no beteran wa ono-ono ikkagen o motte-iru mono de arimasu.
 fishing of veteran(s) as-for each person personal opinion (obj.) holds thing/situation is
Seasoned fishermen each have their own personal views (about fishing). (PL3)

- *beteran*, from English "veteran," is used refer to people with lengthy experience in almost any field, but it has no association with military service: *tsuri no beteran* = "veteran of fishing" → "experienced fisherman."
- *ono-ono* means "each" when referring to people: "each person/child/student/etc."
- *motte-iru* is from the verb *motsu* ("hold/carry/own"). The *-te-iru* form indicates a continuing action or condition, so *motte-iru* refers to holding something on a lasting basis: "has (an opinion/view)."
- *de arimasu* is the PL3 form of *de aru*, a more "formal/literary" equivalent of *desu* ("is/are"). *Mono* is literally "thing," but *mono desu* after a non-past verb implies that the action or situation indicated by the verb is "common/standard/the way things are or should be."

3

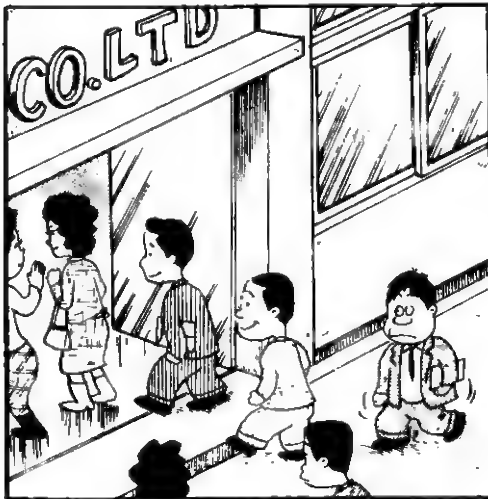

Narration: それ が 時として、和やかな 釣り談議 を 一変、
Sore ga toki to shite, nagoyaka-na tsuri-dangi o ippen,
 that (subj.) on occasion mild/harmonious fishing discussion (obj.) transform suddenly/completely
 剣悪な ムード に してしまう こと も ある のです。
ken'aku-na mūdo ni shite shimau koto mo aru no desu.
 threatening/stormy mood to make (regret) thing/occasion also exist(s) (explan.)
That can sometimes abruptly transform a harmonious discussion of fishing and turn it into a stormy mood. (PL3)

- *ippen* is a noun meaning "a complete change/transformation," but here it is being used as short for the verb form *ippen shite*, from *ippen suru*. The *-te* form of a verb often functions like "and": "suddenly transforms the discussion and . . ."
- *ken'aku-na* (more properly written 険悪な) means "perilous/threatening/stormy."
- *shite* is the *-te* form of *suru* ("do/make"). *Shimau* after the *-te* form of a verb implies the action or its result is regrettable/undesirable.
- *koto* is literally "thing," but it is often used in a more abstract sense to mean "situation/circumstance/occasion." *Koto mo aru* is an expression meaning the described situation/circumstance "can occur/sometimes does occur."
- *no desu* is an explanatory form that can be literally thought of as "It is the case that . . . /the situation is that . . ." Such explanatory forms are used much more often in Japanese than in English. Here it essentially shows that the narration is providing some background for the story that follows.

 city center in/at exists/is located of medium standing construction company at is working/employed
Fishing fanatic Mr. Hamasaki Densuke works at a construction company of middle rank located in the city center. (PL3)

- *-baka* literally means “idiot/fool,” but as a suffix to the name of an activity it refers to a person who is an “aficionado/enthusiast” of that activity, so *tsuru-baka* = “fishing buff/nut/fanatic.” *Kichigai* (“crazy person”) is also used as a suffix in the same way, and *tsuri-kichigai* is a close synonym. See below.
- the name 浜崎 is usually read/pronounced Hamazaki, but Densuke insists on Hamasaki, as it’s pronounced in his native Kyūshū.
- *-shi* is a formal title similar to *-san* (“Mr./Ms.”), but unlike *-san* it is used only for referring to a third person, not for addressing one’s listener, and it is used only rarely for women.
- 都 *to* means “capital city” and 心 *shin* means “heart/core,” so 都心 *toshin* refers to the center of Tokyo. Roughly speaking, it refers to Chiyoda Ward and Chūō Ward where the imperial palace, government offices, and Tokyo’s central business district are located. In recent times, Shinjuku has been called *fuku-toshin*, or “second city-center.”
- *chūken* implies both “middle standing” and “mainstay.”
- *kinmu* means “service/duty” and *kinmu suru* means “serve/do one’s duty/work.” *Kinmu shite-orimasu* is the *-te* form of *kinmu suru* plus the PL3 form of *oru*, a polite/humble equivalent of *iru* (“be/exist”). A form of *iru* (or *oru*) after the *-te* form indicates a continuing action or condition.

no tsūkin jikan wa yaku ichijikan to shōshō...
 of commuting time as-for approximately one hour and a little
The commute from the old government-owned townhouse apartment where he lives takes a little more than an hour. (PL3)

- the personal title *-shi* is normally used with surnames alone or with full names; using it with only a person’s first name has a familiar, informal, and slightly humorous feeling — something like using “Mr.” with a first name in English.
- *Densuke-shi no sumika de aru* is a complete thought/sentence (“[It] is Mr. Densuke’s residence”) modifying *terasu hausu* (from English “terrace house,” referring to two-story, townhouse-style apartments with verandas/terraces built out over the roof of part of the first story). Many sentences that might otherwise end in *desu* must be changed to *de aru* when used as a modifier.
- *kōdan no* and *furui* also modify *terasu hausu* independently, as parallel modifiers. *Kōdan* means “public corporation,” and *kōdan (no)* as a modifier means “government built/owned.”
- *no* after *kara* (“from”) turns everything before it into a modifier for *tsūkin jikan* (“commuting time”).
- *to* means “and” only when used between two nouns (or clauses functioning as nouns).
- *desu* or *de arimasu* (“[the commuting time] is”) is understood at the end of the sentence → “[the commute] takes...”

Sasaki: *Kyō wa isogashii tokoro jikan o saite itadakimashite dōmo...*
 today as-for busy place/situation time (obj.) cut up/set apart receive thank you
"Thank you so much for setting aside time to see us today amidst your busy schedule."
 (PL3-4 implied)

- *tokoro* is literally "place" but is often used more abstractly in idiomatic expressions; following an adjective it can make an expression meaning "under/amidst (the condition described)."
- *saite* is the *-te* form of *saku*, literally meaning "cut up/cleave," but, when speaking of time, meaning "spare/find/set aside (time)."
- *itadakimashite* is the formal *-te* form of *itadaku* ("receive" — polite); *itadaku* after the *-te* form of a verb can be literally translated as "receive the favor of (the action)."
- *dōmo* in this case is shorthand for the PL3-4 expression of thanks, *dōmo arigatō gozaimasu*.

Client: *Iya, nanno nanno.*
 no not-at-all not-at-all

"Oh, no, not at all, not at all." (PL2)

- *nanno* is an interjection whose meaning can vary, but here it's like "not at all/it's nothing."

69

Sasaki: *Kokoro-okinaku o-kutsurogi kudasai.*
 without reserve (hon.)-relax/unwind please
"Please make yourself at home and enjoy yourself." (PL4)

- *o-* is honorific and *kutsurogi* is from *kutsurogu* ("relax/unwind/be at ease"). *O-kutsurogi kudasai* is the PL4 equivalent of *kutsuroide kudasai*, "please relax/unwind."

70

Sasaki: *Rei no yokyō mo chan-to yōi shite-arimasu kara...*
 the said entertainment also appropriately has been prepared because
"(Because) we've even prepared that same entertainment..." (PL3)

- *rei no* is used to refer to something both speaker and listener know about: "that thing I/you/we/someone did or spoke of before." Here we can think of it as implying "your favorite (entertainment)."
- *chan-to* in this context can be thought of primarily as adding emphasis, but it also carries with it some of the feeling of "as is necessary if we are to properly/appropriately entertain you."
- *yōi* = "preparations," and *shite-arimasu* is the PL3 form of *shite-aru*, combining *suru* ("do") and *aru* ("exist"). *Aru* after the *-te* form of a verb means the action has been done: *yōi suru* = "do preparations" → "prepare," and *yōi shite-aru/arimasu* = "has been prepared."

Client: *Ho! Are o?!*

"Oh? (You've prepared) that?" (PL2)

71

Sound FX: *Pon pon* (effect of clapping hands to summon the entertainers; applause would be *pachi pachi*)

72

Geisha: *Mā, Shachō-san, o-hisashiburi—!*

"Well then, (let's begin) right away." (PL4 implied)

Sound FX: *Pepen* (twangy sound of the *shamisen*, a 3-stringed instrument played with a large plectrum)

74

Song: *Tabeyanse—, tabeyanse—.*
 please eat please eat
Please have a bite, please have a bite.

Tabeyo ka na, soreto chochon-to karakatte— asobo ka na—
 will eat shall I? or/or instead (cutting/poking/clapping FX) tease/play with-and will play shall I?
Shall I take a nibble? Or shall I just poke at it and tease it and play with it instead?

- the song and dance represent a trolling fisherman and a capricious fish. *Tabeyanse* is a pre-modern command/request form of *taberu* ("eat") no longer in general use. This first line is apparently the fisherman's. *Tabeyo* is a shortened *tabeyō*, the form of *taberu* showing will/intent. The second line is apparently the fish's.
- *cho(n)chon* represents sounds/actions repeated lightly and easily, such as the sound of wooden clappers, chopping something on a cutting board, and "dotting" kana with two dots. Here it seems to represent a fish "nudging/tugging at" the bait on a hook. Adding *-to* makes it an adverb, so *chochon-to* is like saying "with a *chochon*/in a *chochon* manner," and *chochon-to karakatte asobo ka na* could more literally be rendered, "Shall I play with it by teasing it with a *chochon* action."

75

Hamasaki: *Na, nan su ka, are!?*

(continued from previous page)

86

Hamasaki: あの 不器用な 課長 が ...
Ano bukiyō-na kachō ga ...
 that clumsy/awkward section chief (subj.)
"My clumsy boss is ..." (PL2)

- he is impressed by the lengths to which his boss is going — jumping right in, in spite of his clumsiness.

87

Hamasaki: よーし 課長 ひとり を 道化 にはしないス!!
Yo—shi. Kachō hitori o dōke ni wa shinai su!!
 all right section chief one person/alone (obj.) clown/buffoon will not make
"OK, I won't let my boss be the only clown." (PL2)

- *kachō hitori* = "the section chief alone"
- ... *ni suru* is an expression meaning "make (something) into ...," and ... *ni shinai* is the negative form of the expression: "not make into," or, as in this case, "not let be." *Wa* adds emphasis.

88

Geisha: チョコンと アタリ が ありやした
Chokon-to atari ga ariyashita.
 (small action FX) hit/strike (subj.) had/existed/there was
"I got a little nibble."

Hamasaki: ハ、ヨイショ 食べよ かなん
Ha yoisho, tabeyo ka nan.
 (interj.) (interj.) will eat shall I?
"Okay now, shall I take a nibble?"

Sasaki: 食べずに チョチョンと 逃げよ かね
Tabezu ni chochon-to nigeyo ka ne
 without eating tightly will run away shall I?
"Shall I not and lightly run away?"

- *ariyashita* is a corruption of *arimashita*, the PL3 past form of *aru* ("exists/there is").
- *ka nan* is simply another variation of *ka na*.

89

Client: ワッハッハ ワッハッハ
Wahhahha Wahhahha
"Ah hah hah! Ah hah hah!" (boisterous laugh)

90

Narration: 社長 は 上機嫌。 自ら 銀座 に 繰り出そう と いい出しました。
Shachō wa jōkigen... Mizukara Ginza ni kuridasō to iidashimashita.
 company president as-for good humor by himself (place) to let's go out as group (quote) suggested
The president was in high spirits. He himself came out with the suggestion that they all go to Ginza together. (PL3)

- *kuridasō* is the form of *kuridasu* ("go/turn out as a group") showing will/intent ("I'll /let's").
- *iidashimashita* is the PL3 form of *iidasu*, from *iu* ("say") and the suffix *-dasu* ("begin -"), so it is literally "began to say [let's go]"; but *iidasu* often has the meaning of "suggest/come out with a suggestion."

91

Client: ワッハッハッハ
Wahhahhahha
"Ah hah hah hah!"

92

Client: イヤーッ 愉快 じゃった。
Iya—! yukai jatta.
 no/oh enjoyable was
"Boy, that was fun!" (PL2)

- older speakers, especially males, often substitute *ja* for *da* ("is/are") and *jatta* for *datta* ("was/were"). These are also the usual forms in some local dialects.

Sound FX: ドサッ
Dosa! **Thud** (effect of plopping himself down on the seat)

93

Narration: と、ここまでの 接待 は 大成功 だったのですが ...
To, koko made no settai wa daiseikō datta no desu ga ...
 (quote) here as far as of entertainment of clients as-for huge success was (explan.) but
Thus, the evening up to this point was a great success, but ... (PL3 implied)

- using a quotative *to* at the beginning of the sentence works something like English "thus/in this way," referring back to all that has been presented so far as being the detailed content of the next mentioned action/event. *To* is called "quotative" because it most commonly marks the content of what was said or thought (. . . *to itta*, . . . *to omotta*), but it can also mark the content of other actions — such as the present *daiseikō datta* ("was a huge success").
